PROFESSIONAL SUMMARY

Aspiring Python Developer with strong foundations in Python, Pandas, NumPy, MySQL, and SQL. Hands-on experience building data-driven analytics pipelines, backend applications, and ML-powered solutions. Passionate about software development, database design, and solving real-world problems through technology. Immediate joiner with strong analytical thinking, problem-solving, and team collaboration skills.

TECHNICAL SKILLS

- **Programming:** Python, Pandas, NumPy
- **Database:** MySQL, SQL
- **Operating System:** Linux
- **Analytics & Visualization:** Power BI, Tableau

PROJECTS

FraudShield UPI – Hybrid UPI Fraud Detection System

Tools: Python, Scikit-learn, Random Forest, Logistic Regression, MySQL

- Built a hybrid UPI fraud detection system combining Machine Learning-based anomaly detection with rule-based verification techniques using Python and Scikit-learn to identify both known and emerging fraud patterns in real time.
- Implemented ML classifiers — Random Forest and Logistic Regression — to classify UPI transactions by risk level, evaluating parameters such as transaction amount, frequency, spending history, and device identity to reduce false positives.
- Designed and managed a MySQL database schema for secure storage of transaction records, user behaviour logs, and fraud alerts, supporting efficient querying and historical analysis.
- Developed a Python Flask/FastAPI backend to process transactions in real time, compute risk scores, and trigger instant alerts for suspicious activities, with a dashboard interface for reviewing and acting on flagged transactions.

Marketing Analytics Portfolio

Tools: Python, SQL, MySQL, Pandas, Power BI

- Extracted and cleaned sales data from a MySQL database using structured SQL queries to identify product trends, customer segments, and regional revenue patterns across multiple time periods.
 - Applied Python (Pandas, NumPy) for statistical trend analysis, correlating marketing campaign activity with sales performance metrics to uncover high-impact channels and seasonal demand shifts.
 - Designed and built interactive Power BI dashboards visualizing key KPIs, sales growth trends, and campaign ROI for stakeholder reporting, enabling faster data-driven decision making.
 - Delivered actionable insights that helped the company optimize marketing spend allocation and boost sales by identifying high-ROI channels and underperforming segments.
-

EDUCATION

B.E. Computer Engineering 09/2022 – 05/2026

Alard College of Engineering & Management, Pune

HSC – Maharashtra State Board 06/2021 – 03/2022

Pandit J.N. Jr College, Ashti | 80%

SSC – Maharashtra State Board 06/2019 – 05/2020

Shri Deshikendra High School, Latur | 90%

CERTIFICATIONS

Publication: A Survey on UPI Fraud Detection System

Published in: IJARASEM, Volume 12, Issue 5, September-October 2025
