

ABHISHEK BIRAJDAR

Cloud Engineer

+91 93070 05729 | abhishekbirajdar940@gmail.com | linkedin.com/in/mr-abhishek-birajdar | github.com/abhishek3012 | Pune, Maharashtra

PROFESSIONAL SUMMARY

Computer Engineering student with hands-on, project-based experience building AWS infrastructure, CI/CD pipelines, and containerized deployments. Comfortable working across the DevOps toolchain — Terraform, Docker, Kubernetes, Jenkins, and GitHub Actions — with a working knowledge of Linux administration and core networking concepts. Looking to bring this foundation to a Cloud Engineer or DevOps Engineer role and contribute to building reliable, production-grade infrastructure.

TECHNICAL SKILLS

Cloud Platforms: AWS (EC2, S3, IAM, VPC, RDS, CloudWatch)

Operating Systems & Networking: Linux, Windows, TCP/IP, DNS, HTTP/HTTPS, Load Balancing

DevOps & CI/CD Tools: Docker, Jenkins, Kubernetes, Terraform, Git, GitHub, GitHub Actions

Programming Languages & Databases: Python, Bash, MySQL

Monitoring & Virtualization: CloudWatch, Grafana, VMware, VirtualBox

PROJECTS

UPI Fraud Shield – Real-Time Fraud Detection System

Tech Stack: Python, Scikit-learn, Pandas, NumPy, FastAPI, Random Forest Classifier, Cloud Deployment, CI/CD

- Predictive Model Development:** Trained a Random Forest Classifier on 250,000+ historical UPI transactions, achieving 99.8% precision in detecting fraudulent patterns.
- Feature Engineering & API Design:** Engineered a 14-point feature pipeline (Pandas, NumPy) from a single UPI ID, served via a low-latency FastAPI microservice.
- Cloud Deployment:** Deployed the FastAPI ML service to a cloud platform, serializing the model for fast in-memory inference and near-instant responses.
- CI/CD Automation:** Built and maintained a CI/CD pipeline to automate testing and deployment of the ML service as the model evolved.

Self-Healing & Scalable Multi-Tier Architecture

Tech Stack: AWS (EC2, S3, RDS), Terraform, Docker, Kubernetes/EKS, Jenkins, Linux

- High Availability Design:** Designed a multi-AZ architecture using Terraform to deploy an Application Load Balancer (ALB) and an Auto Scaling Group (ASG), ensuring 99.9% application uptime.
- Scalable Compute:** Managed a fleet of Dockerized application nodes on EC2, configuring health checks to automatically replace unhealthy instances within the ASG.
- Database Integration:** Provisioned a secure Amazon RDS instance within a private subnet, using Terraform to manage security groups and database subnet groups for strict data isolation.
- Rolling Deployments:** Orchestrated a Jenkins CI/CD pipeline to execute rolling deployment strategies, enabling seamless application version updates without interrupting user traffic.

EDUCATION

B.E. in Computer Engineering

Alard College of Engineering & Management, Pune, India

Sep 2022 – May 2026

Maharashtra State Board – HSC (80%)

Pandit J. N. Jr. College, Ashti, India

May 2021 – Mar 2022

Maharashtra State Board – SSC (90%)

Shri Deshikendra High School, Latur, India

May 2019 – May 2020
